Medigrade Raspberry Ketones Producer Reveals Important Fact About Raspberry Ketone Supplements

Have You Been Misled About Your Raspberry Ketone Supplement?

Know The Truth About Your Weight Loss Supplement

In December of 2013 Medigrade launched it's Raspberry Ketone supplement on Amazon and revealed something you might want to know about your Raspberry Ketone Supplement.

If you have ever wanted to drop a few pounds you have probably heard about Raspberry Ketones, and maybe you tried the supplement out.

On TV, this popular weight loss supplement has been reported to contain the amount of Raspberry Ketones that would be found in 90 pounds of Red Raspberries, in 100 milligrams of this supplement. What Medigrade revealed in their video <a href="https://www.where.org/w

The truth about Raspberry Ketones is, although they might be an effective tool to aid in weight loss, they are synthesized in a laboratory. It's simply not cost effective or environmentally friendly to extract Raspberry Ketones from fresh raspberries to produce this supplement.

Some Raspberry Ketones capsules contain as much as 500 milligrams of Raspberry Ketones per capsule with, 60 capsules per bottle. To put this in perspective, imagine using 27,000 pounds of Raspberries to produce a single bottle of Rasberry Ketones. That's what it would take to make One bottle of Medigrade Pure Rasberry Ketones 500.

The fact that Medigrade has revealed this about their product is a revolutionary step for Supplement Companies in Nutrition Fact Disclosure. Medigrade is pioneering the path for Conscious Consumerism by informing the public about product ingredients, so You and I are in the know about what we are purchasing.

In addition to their raspberry ketone supplement, Medigrade has recently released a Garcinia Cambogia supplement, and has reported they'll be making a line of Organic Foods and Supplements available as well.
